Objective

Results-driven aspiring **Software Developer** with strong foundations in programming, backend development, and data-driven systems. Seeking an opportunity to design and develop scalable, high-performance applications, apply problem-solving and software engineering skills, and contribute to building reliable technology solutions that support organizational innovation and growth.

Education

Lovely Professional University **Jalandhar, Punjab**
Bachelor of Technology in Computer Science and Engineering, CGPA: 7.0 *Aug 2023 – Present*
Relevant Coursework: Data Structures and Algorithms, Operating Systems, Database Management Systems, Artificial Intelligence and Machine Learning Fundamentals, Computer Networks and Networking Concepts.

Sri Chaitanya Junior College **Hyderabad, Telangana**
Intermediate (12th Grade), Percentage: 95% *Jun 2021 – Apr 2023*
Key Subjects: Physics, Chemistry, Mathematics

Bhagavathi E/M High School **Karimnagar, Telangana**
Matriculation (10th Grade), CGPA: 10 *Jun 2020 – Apr 2021*

Technical Skills

Programming Languages: Python, Java, C, C++, SQL
Backend Development: Flask, Django, RESTful APIs
Databases: MySQL, MongoDB, PostgreSQL
Frameworks/Libraries: Flask, Django, Scikit-learn, Pandas, NumPy, Matplotlib
Tools/Technologies: Git, Docker, Excel, Power BI

Projects

Project Title: *Crime Patterns Analysis Across New York - Interactive Dashboard*
Description: Analyzed New York crime trends across locations and time periods using Excel for data processing, pivot tables, and visual analytics. Generated actionable insights and hotspot visualizations to highlight patterns.
Technologies Used: Python (Pandas, NumPy, Matplotlib, Seaborn) and Excel
Impact/Achievements: Identified high-crime areas and peak time periods, enabling more targeted interventions and informed decision-making. Streamlined data analysis using Excel, improving efficiency and clarity of reports, and created visualizations that effectively communicated key crime patterns to stakeholders.
Demo/Code Link: GitHub Repository

Project Title: *EmotionScope – Real-time Sentiment Analysis Tool*
Description: Developed EmotionScope, a real-time text sentiment classification tool that classifies text as positive, negative, or neutral.
Technologies Used: Python, Scikit-learn, Pandas, NumPy, TF-IDF/Count Vectorizer, Logistic Regression
Impact/Achievements: Delivered accurate and real-time sentiment predictions, enabling efficient text analysis. The reusable models ensured consistent performance across datasets, while the interactive Streamlit interface

simplified sentiment insights for non-technical users.
Demo/Code Link: GitHub Repository

Certifications

GenAI Powered Data Analytics Job Simulation: Certification by Tata (Completed in Aug 2025).

Responsive Web Design: Certification by freeCodeCamp (Completed in Aug 2025).

Bring AI to AI Workshop: by Google Workspace (Completed in May 2025)

Achievements

Code Off Duty – A Web Hackathon: Ranked among top 5 participants in the hackathon conducted by Coding Wise.
Arena – A Web Hackathon: Ranked among top 10 participants in the hackathon conducted by Coding Blocks.

AI Recommendations for Improvement

Recommendation 1: Focus on end-to-end software development projects with measurable impact, integrate backend and API work, and add targeted certifications like full-stack development, REST API development, or cloud-based backend architecture.

Recommendation 2: Apply DSA Concepts in Projects: Use learned algorithms to optimize backend logic, improve efficiency, and handle large datasets in your projects, emphasizing measurable impact.
Recommendation 3: Obtain and leverage the GCP Associate Cloud Engineer certification to demonstrate practical cloud computing skills, including deployment, management, and scaling of applications on Google Cloud.

Self-Assigned Tasks (Till 10th week of this semester)

Task 1: Work on full-stack or backend projects, designing architecture, implementing APIs, connecting databases, and deploying applications. Showcase these on GitHub with clear documentation and measurable performance metrics.
Task 2: Integrate DSA in projects to optimize algorithms, improve performance, and handle large datasets efficiently.
Task 3: Complete the **GCP Associate Cloud Engineer course** and gain hands-on experience.

Targets Allocated (Till 10th week of this semester)

Targets Approved by Course Instructor

- Work on full stack/ backend website.
- Implement Data Structures and Algorithms in projects.
- Complete certification in GCP Associate Cloud Engineer course.
